

Building Wealth as a Software Engineer

We all know that Software Engineers are part of the pillars of high-paying jobs. But, being highly paid is also something that is NOT coming by night. Most of the time, there is passion, growth, discipline, and experience to make you a highly paid person. For me building wealth and making money was the last thing in mind before being excellent in what I can do.

I was just always focused on tech, books, code, devs, and community. I even picked a Masters degree in Software Engineering and built systems for fast improvement over the years.

Today, I happily say that I have completed the SE (Software Engineer) personality. Now all I need to do is the maintenance part, as we do when we build software products and great software products must be maintained.

Over my career years, I have tried to create savings. Actually, creating savings was something that I learned very young. Probably you are familiar with cartoons where the kid is putting coins in the piggy bank. Right?

I was that kid.

However, I was never familiar with building wealth until I read a book ... which changed my perception of money and wealth. The name of the book is: [The Psychology of Money: Timeless lessons on wealth, greed, and happiness by Morgan Housel](#)

This book improved my financial expertise highly and gave me the courage to invest. Today I am more familiar with recession, and inflation than ever. I feel happy about the future and how the book methods affect me to be richer every year.

These methods can be applied by anyone and are not related to any employee title, freelancer, or business owner.

According to the information era and AI finance education is more important than ever.

So sit tight, relax use the Black Friday discounts buy this [book](#), and learn.
